No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Patent No. 6780587

GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT: PARE International, Inc.
APPLICANT: PARE International, inc.
APPLICANT: Winversity of Hawaii
TITLE OF INVENTION: Mutations in a gene encoding an ABC transporter (MRP6) causing
TITLE OF INVENTION: Pseudoxanthoma Blasticum
FILE REFRENCE: PRE-001

CURRENT APPLICATION NUMBER: US/09/792,616

CURRENT FILING DATE: 2001-02-23
NUMBER OF SEQ ID NOS: 27

SOFTWARE: Patentin version 3.0

SEQ ID NO 3

LENGTH: 1503
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö

Squence 19834, Application US/11096568A

Publication No. US20060048240A1

GENERAL INFORMATION:

APPLICANT: Alexandroro, Nickolai et al.

TITLE OF INVENTION: Sequence-Determined DNA Fragments and Corresponding Polypeptides

TITLE OF INVENTION: Therby

TITLE OF INVENTION: Therby

TITLE OF INVENTION: Therby

TITLE OF INVENTION: 176=279

CURRENT APPLICATION NUMBER: US/11/096,568A

CURRENT FILING DATE: 2005-04-01

NUMBER OF SEQ ID NOS: 34471

Novel peptides capable of binding Rhesus D antibodies are used to manufacture an agent for the diagnosis, therapy or prophylaxis of diseases associated with Rhesus D antigen, e.g. hemolytic disease of the newborn (HDN).

Example 1; Page 8; 19pp; English.

more The present invention describes peptides capable of binding Rhesus D antibodies [I]. Also described in the present invention are: (1) a nucleic acid (II) encoding (I); (2) a vector (III) comprising one or (II) operably linked to an expression control system; (3) a cell (IV) comprising (II) or (III); (4) preparing (I); (5) identifying (M1) peptides having immunologic properties of Rhesus D protein epitopes comprising subjecting an antibody/antibody fragment recognising an epitope of Rhesus D protein to several panning rounds with a phage 

display library, and identifying immunogenic peptide sequences which are minotopes which differ in their amino acid sequence from the amino acid sequences which differ in their amino acid sequences of Rhesus D protein, and (6) peptides (V) with immunological properties of Rhesus D protein, epitopes obtained by (M1). (I) is used to manufacture an agent for the diagnosis, therapy or prophylaxis of diseases associated with Rhesus D antigen, e.g. haemolytic disease of the newborn (HDN) or idiopathic thrombocytopenic purpura (ITP), for the manufacture of an affinity reagent for anti-Rhesus D antibodies purified or removed from body fluids or immunoglobulin preparations. Using (I) as an immunogen to raise anti-Rhesus D antibodies avoids using immunistion with foreign erythrocytes thereby avoiding the risk of transmission of viral diseases like AIDS and hepatitis B. The present sequence represents an anti-Rhesus D (Rh) antibody related peptide which is used in an example from the present invention 8

New polypeptides derived from Streptococcus agalactiae are useful to provide detection of, and vaccination against, Group B Streptococcus infections, particularly to prevent infection in neonatals.

Claim 1; Fig 1; '178pp; English

AAU015601-AAU01722 represent Group B Streptococcus (Streptococcus agalactiae) amino acid sequences of the invention. S. agalactiae is an encapsulated bacterium which is a major pathogen of humans causing sepsis and meningitis in neonates as well as adults. The S. agalactiae antigenic polypeptides are used to vaccinate against Group B Streptococcus infections, particularly to prevent infection in new born children arising from the maternal genital tract. An immunogenic composition is useful in the preparation of a medicament for the treatment or prophylaxis of Group B Streptococcus infection. The invention does not have the disadvantages of varied response rate associated with prior art

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to an isolated nucleic acid comprising any one of the 6213 antisense sequences given in the specification where expression of the nucleic acid inhibits proliferation of a cell. Also included are:

(1) a vector comprising a promoter operably linked to the nucleic acid concoding a polypeptide whose expression is inhibited by the antisense nucleic acid; (2) a host cell containing the vector; (3) an isolated polypeptide or its fragment whose expression is inhibited by the antisense nucleic acid; (4) an antibody capable of specifically binding antisense nucleic acid; (4) an antibody capable of specifically binding the polypeptide; (6) inhibiting cellular proliferation or the activity of a gene in an operon required for proliferation or the that has an activity against a biological pathway required for proliferation, or that has an activity against a biological pathway in which a proliferation-required gene or the biological pathway in which a proliferation-required gene or the biological pathway in which a proliferation-required gene or the product its pathway in which a proliferation-required gene or its gene product lies or a agene on which the test compound that inhibits proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profiling a gene on which the test compound that inhibits proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profiling a gene on which the test compound that inhibits in which extent the properties of the product or 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New antisense nucleic acids, useful for identifying proteins or screening for homologous nucleic acids required for cellular proliferation to isolate candidate molecules for rational drug discovery programs.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  compound's activity; (11) a culture comprising strains in which the gene product is overexpressed or underexpressed; (12) determining the extent to which each of the strains is present in a culture or collection of

                                                                                                                                         ð
```

```
New recombinant DNA construct comprising a promoter positioned to provide for expression of a polymucleotide ehcoding a polypeptide from a microbial source, useful for producing plants with improved properties.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to a recombinant DNA construct comprising a promoter functional in a plant cell, where the promoter is positioned to provide for expression of a polynucleotide encoding a polypeptide from a microbial source. The invention also relates to a transformed plant comprising the recombinant DNA construct and a method of producing a transformed plant transformed plant having an improved property. The plant is a crop plant
proliferation of an organism. The antisense nucleic acids are useful for identifying proteins or screening for homologous nucleic acids required for cellular proteins or screening for homologous nucleic acids required for cellular proliferation to isolate candidate molecules for rational drug discovery programs, or for screening homologous nucleic acids required for proliferation in cells other than S. aureus, S. typhimurium, K. pneumoniae or P. aeruginosa. The present sequence is encoded by one of the target prokaryotic essential genes. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Recombinant DNA construct; transformed plant; improved plant property; cold tolerance; heat tolerance; drought tolerance; herbicide; osmosis; pathogen tolerance; pest tolerance; plant disease resistance; cell cycle pathway modification; plant growth regulator; homologous recombination; seed oil yield; protein yield; carbohydrate; nitrogen; phosphorus; photosynthesis; lignin; galactomannan;

combinate or soybean. The method of producing a transformed plant be having an improved property comprises transformed plant with the recombinant DNA construct and growing the transformed plant, where the polynucleotide or polypeptide is useful for improving plant properties.

C polynucleotide or polypeptide is useful for improving plant properties.

C improved plant properties, e.g. improved cold, heat or drought tolerance, tolerance to herbicides, extreme osmotic conditions, pathogens or peets, increased resistance to plant disease, better growth rate by modification of the cell cycle pathway with plant growth regulators, increased rate of content, improved yield by modification of carbohydrate, nitrogen or phosphorus use and/or uptake, by modification of photosynthesis or by providing improved plant growth and development under at least one stress condition, improved lignin production or improved galactomannan condition, improved lignin production or improved galactomannan production. Note: The sequence data for this patent did not form part of the invention. Note: The sequence data for this patent did not form part of the printed specification but was obtained in electronic commant from the form part of the printed specification but was obtained in electronic commant from the form part of the printed specification but was obtained in electronic commant from the printed specification but was obtained in electronic command the printed specification but was obtained and the printed specification but was obtained in electronic command the printed specification but was obtained and the printed specification but was obtained the printed specification but was obtained and the printed specifi
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ..

cc (1) a vector comprising a promoter operably linked to the nucleic acid encoding a polypeptide whose expression is inhibited by the antisense nucleic acid; (2) a host cell containing the vector; (3) an isolated polypeptide or its fragment whose expression is inhibited by the antisense nucleic acid; (4) an antibody capable of specifically binding the polypeptide; (6) inhibiting cellular proliferation or the activity of agene in an operon required for proliferation or that has an activity against a biological pathway required for proliferation, or that inhibits proliferation; (8) identifying a gene required for cellular proliferation or the biological pathway in which a proliferation-required gene or its gene product lies or a gene on which the test compound that inhibits proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profiling a compound sactivity; (11) a culture comprising strains in which the sexent or which each of the strains is present in a culture or collection of strains; or (13) identifying the target of a compound that inhibits the extent or which each of the strains is present in a culture or collection of strains; or (13) identifying the target of a compound that inhibits the collection of compounds or collection of an organism. The antisense nucleic acids are useful for identifying proteins or screening for homologous nucleic acids required for proliferation in cells other than S. aureus, S. typhimurium, ceptured for proliferation in cells other than S. aureus, S. typhimurium, centured the target prokaryotic essential genes. Note: The sequence data for this parent did not form part of the parinted sequence as encoded by one of the target prokaryotic essential genes. Note: The sequence data for this parent in elections of the parinted sequence is encoded by one of the target prokaryotic essential genes. Note: The sequence data for this

N-PSDB; ACA28751

The invention relates to an isolated nucleic acid comprising any one of the 6213 antisense sequences given in the specification where expression of the nucleic acid inhibits proliferation of a cell. Also included are.

```
The invention relates to an isolated nucleic acid comprising any one of the invention relates to an isolated nucleic acid comprising a promoter operation where expression of the nucleic acid inhibits proliferation of a cell. Also included are:

CC of the nucleic acid inhibits proliferation of a cell. Also included are:

CC oncoding a polypeptide whose expression is inhibited by the antisense contisense nucleic acid; (2) a host cell containing the vector; (3) an isolated or antisense nucleic acid; (4) an antibody capable of specifically binding the polypeptide or its fragment whose expression is inhibited by the antisense cc antisense nucleic acid; (4) an antibody capable of specifically binding the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular proliferation or the activity of a gene in an operon required for proliferation, or that has an activity against a biological pathway crequired for proliferation, or that inhibits cellular proliferation; (8) identifying a gene required for cellular proliferation or the biological pathway in which a proliferation required gene or its gene product lies or a gene on which the test compound that inhibits proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profiling a compound sectivity; (11) a culture comprising strains in which the gene compound that inhibits the extent or which each of the strains is present in a culture or collection of creating creating for compound that inhibits the cyptorial proteins or screening for homologous nucleic acids are useful for each an organism. The antisense nucleic acids are useful for each an organism contains and antisense nucleic acids are useful for for acid and an organism or the candidate molecules for acid and an organism or each and and an organism or each and an organism or ea
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         identifying process...

The invention relates to a protein (ABP25413-ABP30895) from group B streptococcus/GBS (Streptococcus agalactiae) or group A streptococcus/GBS (Streptococcus agalactiae) or group A streptococcus/GBS (Streptococcus pyogenee), comprising one of 5483 sequences (S1), given in the specification. The proteins have antibacterial and antiinflammatory continuity. (1), nucleic acids encoding (1), ABN6604-ABN71526 and cativity. (1), nucleic acids encoding (1), ABN6604-ABN71526 and cativity corporation of infection or disease caused by streptococcus bacteria, particularly S. agalactiae and S. pyrogenes. Streptococcus bacteria, particularly S. agalactiae and S. pyrogenes. Nucleic acids encoding (1) are used to detect Streptococcus in a compound binds to biological sample. (1) is used to detect Streptococcus in a compound binds to biological sample. (1) is used to detect streptococcus in a compound binds to streptococcus that is prevented or treated may be maningitis. Nucleic Streptococcus that is prevented or treated may be maningitis. Nucleic acid encoding (1) may be used to recombinantly produce (1) and may be used in gene therapy. Antibodies to (1) are used for affinity chromatography, immunoassays, and distinguishing/identifying
                                                                                                                                                                                                                                                                                                                                                                               New Streptococcus protein for the treatment or prevention of infection or disease caused by Streptococcus bacteria, such as meningitis, and for detecting a compound that binds to the protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Antisense; prokaryotic essential gene; cell proliferation; drug design.

The first necessary of the specification where expression of the cll antisense sequences given in the specification where expression of the nucleic acid inhibits proliferation of a cell. Also included are:

(1) a vector comprising a promoter operably linked to the nucleic acid encoding a polypeptide whose expression is inhibited by the antisense nucleic acid; (3) a host cell containing the vector; (3) an isolated polypeptide or its fragment whose expression is inhibited by the antisense nucleic acid; (4) an antibody capable of specifically binding the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular proliferation or the activity of a gene in an operon required for proliferation, (7) identifying a compound that influences the activity of the gene product or that has an activity against a biological pathway required for proliferation, or that inhibits cellular proliferation; (8) identifying a gene required for cellular proliferation of the biological pathway in which a proliferation-required gene or its gene product lies or a gene on which the test compound that inhibits proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profiling a compound sactivity; (11) a culture comprising strains in which each of the strains is present in a culture or collection of strains, or (13) identifying the target of a compound that inhibits the proliferation of an organism. The antisense nucleic acids are useful for identifying proteins or screening for homologous nucleic acids required for a screening for homologous nucleic acids required for a screening or for actioning homologous nucleic acids required for a screening or for actioning homologous nucleic acids are acquired for the strains and the screening cannot be acquired for a screening or homologous nucleic acids are useful for a screening or for account and or for account and or for a confidence and an organism or for a confiden
                                                                                                                                                                                                                                        New antisense nucleic acids, useful for identifying proteins or screening for homologous nucleic acids required for cellular proliferation to isolate candidate molecules for rational drug discovery programs.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            K. pneumoniae or P. aeruginosa. The present sequence is encoded by one of the target prokaryotic essential genes. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at

Protein encoded by Prokaryotic essential gene #15283 ABU29756 standard; protein; 475 AA. (first entry) 93 GYWISAW 99 19-JUN-2003 ABU29756; RESULT 10 

Antisense, prokaryotic essential gene, cell proliferation, drug design.

Enterococcus faecium

WO200277183-A2

```
the 6113 antisense sequences given in the specification where expression of the nucleic acid inhibits proliferation of a cell. Also included are:

(1) a vector comprising a promoter operably linked to the nucleic acid encoding a polypeptide whose expression is inhibited by the antisense nucleic acid; (2) a host cell containing the vector; (3) an isolated on polypeptide or its fragment whose expression is inhibited by the antisense nucleic acid; (4) an antibody capable of specifically binding the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular proliferation or the activity of a gene in an operon required for proliferation; (7) identifying a compound that influences the activity of the gene product or that has an activity against a biological pathway.

The gene product or that has an activity against a biological pathway in which a proliferation or the become of the gene product lies be achieved for cellular proliferation of an antibiotic; (10) profiling a proliferation of an antibiotic; (10) profiling a proliferation of an antibiotic; (10) profiling a
                                                                                                                                                                                                                                                                                                                                                                             or screening
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      K. pneumoniae or P. aeruginosa. The present sequence is encoded by one of
the target prokaryotic essential genes. Note: The sequence data for this
parent did not form part of the printed specification, but was obtained
in electronic format directly from WIPO at

```
The invention relates to a recombinant DNA construct comprising a promoter functional in a plant cell, where the promoter is positioned to provide for expression of a polynuclectide encoding a polypeptide from a microbial source. The invention also relates to a transformed plant comprising the recombinant DNA construct and a method of producing a transformed plant having an improved property. The plant is a crop plant such as maize or soybean. The method of producing a transformed plant the recombinant DNA construct and growing the transforming a plant with the recombinant DNA construct and growing the transformed plant, where the polynucleotide or polypeptide is useful for improving plant properties. The recombinant DNA construct is useful for producing plants with improved plant properties, e.g. improved cold, heat or drought tolerance, improved plant properties, e.g. improved cold, heat or drought tolerance, increased resistance to plant disease, better growth rate by modification of the cell cycle pathway with plant growth regulators, increased rate of homologous recombination, modification of carbohydrate, improved yield and/or producing plants, improved or content, improved yield by modification of carbohydrate, improved yield by modification of carbohydrate, improved yield by modification of carbohydrate, when the content of the cell of th
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New recombinant DNA construct comprising a promoter positioned to provide for expression of a polynucleotide encoding a polypeptide from a microbial source, useful for producing plants with improved properties.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         production. This sequence represents a bacterial polypeptide used in the scope of the invention. Note: The sequence data for this patent did not form part of the printed specification but was obtained in electronic format from USPTO at sequata.uspto.gov/sequence.html.
                                                                                                                        cold tolerance, heat tolerance, drought tolerance, herbicide, osmosis, pathogen tolerance, pest tolerance, plant disease resistance, cell cycle pathway modification; plant growth regulator; homologous recombination; seed oil yield; protein yield; carbohydrate;
                                                                                                                                                                                                                           nitrogen; phosphorus; photosynthesis; lignin; galactomannan; bacterial polypeptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Claim 1; SEQ ID NO 13733; 122pp; English
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Hinkle GJ, Slater SC,
                                                 Bacterial polypeptide #13733.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                             20-FEB-2003; 2003US-00369493

The present invention relates to novel Streptococcus agalactiae

Conclectide sequences (1; Abv87607-Abv87745) and novel polypeptides (II;

Co Abv87746-Abv8950). The nucleotide sequences encode polypeptides of S.

Abv87746-Abv89550. The nucleotide sequences encode polypeptides of S.

Co Abv87746-Abv89550. The nucleotide sequences encode polypeptides of S.

Co Apv87746-Abv89550. The nucleotide metabolism, fatty acid and intermediate (central) metabolism, energetic metabolism, fatty acid and pytimidines and/or nucleotide metabolism, replication, transposite, replication, translation, protein transport, adaptation to atypical conditions, sensitivity to medicines and/or analogues, functions related to transposons, biosynthesis of cofactors, prosthetic groups and transporters, cell membrane proteins and cellular machinery. (1) are useful for the detection and/or amplification of nucleic acids.

Contains for a bacterial S. agalactiae infection. Note: WO200292818A2 equivalent for the present basic patent FR2824074A1. WO20022818A2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Genomic nucleotide sequences encoding polypeptides of Streptococcus agalactiae for the development of vaccines, diagnostic tools, DNA chips and identification of therapeutic targets.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps

The present invention relates to novel Streptococcus agalactiae

nucleotide sequences (I: ADV78860-ADV78998 and ADV83341-ADV85476) and

nucleotide sequences (I: ADV78860-ADV78998 and ADV83205-ADV83340). The

nucleotide sequences encode polypeptides of S. agalactiae involved in the

synthesis of amino acids, cell membranes, intermediate (central)

c synthesis of amino acids, cell membranes, intermediate (central)

c metabolism, energetic metabolism, fatty acid and phospholipid metabolism,

nucleotide metabolism including purines, pyrimidines and/or nucleosides,

regulatory functions, replication, transcription, translation, protein

transport, adaptation to atypical conditions, sensitivity to medicines

and/or analogues, functions related to transposons, biosynthesis of

cofactors, prosthetic groups and transporters, cell membrane proteins and

cellular machinery. (I) are useful for the detection and/or amplification

of nucleic acids. Pharmaceutical composition comprising (I) or (II) are

useful for treatment of a bacterial S. agalactiae infection. The complete

genome of Streptococcus agalactiae is given in ADV81204. Note: The

present patent is an equivalent for the basic patent FR2824074Al, which
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                    Genomic nucleotide sequences encoding polypeptides of Streptococcus agalactiae for the development of vaccines, diagnostic tools, DNA chips and identification of therapeutic targets.

The present invention relates to novel Streptococcus agalactiae

nucleotide sequences (1; ADV78860-ADV78998 and ADV83341-ADV85476) and

nucleotide sequences (1; ADV78860-ADV78998 and ADV81205-ADV83340). The

nucleotide sequences encode polypeptides of S. agalactiae involved in the

synthesis of amino acids, cell membranes, intermediate (central)

metabolism, energetic metabolism, fatty acid and phospholipid metabolism,

nucleotide metabolism including purines, pyrimidines and/or nucleosides,

regulatory functions, replication, transcription, translation, protein

transport, adaptation to atypical conditions, sensitivity to medicines

cand/or analogues, functions related to transposons, biosynthesis of

cofactors, prosthetic groups and transporters, cell membrane proteins and

callular machinery. (I) are useful for the detection and/or amplification

cellular caids. Pharmaceutical composition comprising (I) or (II) are

useful for treatment of a bacterial S. agalactiae infection. The complete

genome of Streptococcus agalactiae is given in ADV81204. Note: The

present patent is an equivalent for the basic patent FR2624074A1, which
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                                                                                                                                                 Genomic nucleotide sequences encoding polypeptides of Streptococcus agalactiae for the development of vaccines, diagnostic tools, DNA chips and identification of therapeutic targets.
                                                                                                                                                                                  Kunst F;

New isolated nucleic acid derived from Enterococcus faecium encoding an Enterococcus faecium polypeptide useful for detection, prevention and treatment of a pathological condition resulting from a bacterial

Example 1; SEQ ID NO 6868; 243pp; English.

nucleic acid is useful for recombinant production of Candida albicans derived peptides or antisense polypeptides. Pharmaceutical compositions and vaccines contraining the nucleic acid are useful for preventing or treating Enterococcus faccium infections. The present sequence represents one if the disclosed E. faecium proteins. The invention relates to an isolated nucleic acid derived from Enterococcus faecium encoding an Enterococcus faecium polypeptide having one of 10 fully defined sequences given in the (or comprising 40 sequencial nucleotides chosen from any of the nucleic acids, its complement or sequences hybridising to it). Also included are a recombinant vector comprising the nucleic acid operably linked to ranscription regulatory element, a cell comprising the vector and a single-stranded probe comprising the nucleic acid. The nucleic acids is useful for diagnosing pathological conditions resulting from E. Baccium bacterial infection (e.g. urinary tract infection, bacteraemia, endocarditis, wounds and abdominal-pelvic infection, and for screening drugs such as agonists and anagonists. The infection and for screening drugs such as agonists and anagonists.

                                                                                                                                                                                                                                                                                                                                                                                 Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
